

LOCKEAN LITE

Autonomous judgment. Independent authority.

Lockean Lite separates AI trading judgment from the authority required to put capital at risk. The AI can decide what it wants to do. It cannot grant itself permission to do it.

01 / AI LOGIC

Autonomous judgment only

The agent receives real completed-session SPY evidence from Alpaca, official VIX history from Cboe, derived market context, and a real SPY option universe.

- Returns strict structured **TRADE** or **NO_TRADE** output.
 - May select only a defined-risk SPY bull call spread from supplied candidates.
 - Cannot supply trusted pricing, maximum loss, compliance, authorization, receipts, or broker instructions.
- REAL RUN: 41 candidates -> NO_TRADE**

Mixed signals still reached the AI. Because the agent declined, Authority, Gateway, and broker were never invoked.

02 / RISK & AUTHORITY

Permission must be earned

When the AI proposes a trade, Lockean independently rebuilds trusted financial facts and applies deterministic authority checks.

- Trusted maximum loss = net debit x 100 x contracts.
 - Checks proposal structure, account state, options level, buying power, evidence identity and exact proposal binding.
 - Issues a signed, short-lived Authorization Receipt bound to the exact proposal fingerprint.
 - Execution Gateway separately verifies receipt signature, expiry and exact fingerprint match.
- \$164 trusted loss > \$150 policy -> REJECTED**

03 / ALPACA INFRASTRUCTURE

Broker access is separate

Alpaca is integrated at separate, auditable boundaries rather than treated as the risk-control mechanism.

- **Market Data:** SPY completed-session evidence.
- **Options APIs:** contract discovery and latest quotes.
- **CLI:** strict read-only paper-account evidence.
- **Paper Trading:** exact MLEG DAY limit-order submission.

FINAL PROOF: Alpaca MLEG FILLED @ \$0.89

A compliant SPY 782/785 spread was authorized, independently verified by the Gateway, submitted to Alpaca paper trading, and confirmed filled.

FINAL EVIDENCE

\$164 > \$150

Risk rejection

AUTHORIZED

Receipt bound to proposal

FILLED @ \$0.89

Alpaca paper MLEG

197 PASSED

0 regressions

Lockean Lite is not primarily an AI trading bot with risk rules attached. It is a separate authorization system that lets powerful AI make autonomous financial judgments without ever becoming its own execution authority.
